

BVEssentials Production Manager expands the **Bill of Materials** module in Sage BusinessVision and lets users control their inventory with pinpoint accuracy, reduce shipping expenses and improve cash flow.

BVEssentials runs on Sage BusinessVision, using its architecture and table structure as the foundation. The purpose of **Production Manager** is to track production order status and raw material quantities, posting the items to the appropriate data location and inventory accounts once production is complete. BVEssentials also updates the general ledger accounts as defined in the Inventory Sales Departments of Sage BusinessVision.

Once a production order is completed, the raw materials used in manufacturing are removed from inventory, and the finished product is placed into inventory at the sum cost of the actual raw materials used to produce the item.

Inventory	Description	Quantity	Built Qty	Remaining Qty	Extended Qty	Unit Cost	Extended Cost	Inv. Usage	Vendor
[00]	SUNSCREEN Sunscreen	125.00000	0.00000	125.00000	125.00000	31.070	3,883.750
